

Overwhelmed by vendor sprawl? Find simplicity with Clearlink Consulting

Vendor sprawl drives up costs, increases risk, and drains resources. Clearlink Consulting simplifies your technology stack into a single, streamlined solution.

One partner. One platform. Zero complexity.

What is vendor sprawl?

Vendor sprawl is the unchecked buildup of software, contracts, and siloed tools across departments and throughout your enterprise's various locations. As companies accumulate **too many fragmented solutions**, their IT environment becomes inefficient and difficult to manage.

Why that's a problem.

Vendor sprawl **forces IT teams to waste time managing fragmented systems** instead of focusing on strategy. It drives up costs through overlapping contracts, creates blind spots that weaken security and compliance, and breaks down collaboration, stalling progress and leaving employees frustrated.

How to regain control.

Clearlink Consulting helps organizations streamline their technology stack through our network of 350+ trusted technology providers. By consolidating services and contracts into **fewer, more robust platforms**, businesses **reduce spend, simplify management, and gain greater visibility** across their operations.

What we deliver:

- **Comprehensive vendor assessments** that uncover redundancies, unused licenses, and hidden costs.
- **Streamlined technology environments** through consolidation to fewer, more capable platforms, reducing spend and simplifying oversight.
- **Optimized provider contracts** with enterprise-level pricing, favorable terms, and predictable costs.
- **Fully integrated systems** that eliminate silos, improve data flow, and enhance visibility across your organization.
- **Centralized vendor management** for accountability, escalation, and strategic alignment, freeing IT teams to focus on innovation.

Ready for a smarter, more connected technology stack?
Simplify your systems, reduce costs, and strengthen visibility across
your entire organization with Clearlink Consulting.
